

About homosexual as parents by adoption.

At first, some words to the button of comprehension. Homosexuality or behaviors in this way are normality in the nature. There is not often, normally about 5 % of a population, in our society it grown up, as specially the definition. The definition contents homosexuality, the behavior it class as bisexuality, the abuse, the homophobia, transgender and transsexual so as Queer or peer group, -organization. They do it because the definition of homosexuality is to have sexual practicing with the same sex. The most homosexual people have a different contents of themselves, that is mostly individual it is right to see themselves as that what they decided to be.

As an example is that scientist find out that males with homosexual/ bisexual inspiration and behaviors are more able to consider in other person, in case of accepting this. So they will be the better husbands. For female it is not necessary, because they are mostly near to them self sex as male. The modern society demands of a modern male that he is able to consider in different case of Life, so that the old cliché of a man is no longer actuality. No one must be longer to hunt for animals to survival. Of course this is only for modern societies and peacefully times. No one has a study about soldiers in a war of these behaviors.

They find out that homophobia is a reaction on a positive feeling for the same sex, in the most case; here it means over 51 % of homophobia. The same is with the genetic determination, 51 % of the population have a gene who allowed them to have an easier inspiration of homosexual activity. It is not the reason to be homosexual. It not declares homophobia or homosexual. That is a process where at the end a person decided to life like that.

It is interesting, that the most interested information about sexuality will find out by the discussion about the homomarriages and about to allow an adoption.

I think for the first step it is clear. But we have to look twice and different it because in the study of homosexual it finds out that there is a different content.

It is in the whole history of the humans clear, that a deciding should be fallen in a free will. That content that the person is clear in the psychological and history of his life, to decide a clear behavior. Of course no one is in this definition clear to decided. But we decide every day every time and we make mistakes. So it should of course to be normal to have or to be a "coming out" or "coming in". But in our society nothing is normal in sex. We also life in clichés of a world of male and female, different in social behaviors. It means like that a female is to be work in a kitchen, during the male is hunting. As special it is difficult to find right words for that process, because here is it not clear as it is in a world of old clichés. We have to think different and this is also a process from one to the next generation.
